If the urine is sent to the laboratory for a culture, I agree with the costs.

Urine collection instructions (washed, mid-stream)

- Preferably morning urine, at least 4 hours after you last urinated.
- Use the sterile container with the red cap that the assistant provided you with to collect the urine.
- First urinate a little bit into the toilet, then catch the urine in the container and finish urinating in the toilet.

For women:

Wash the labia and the area between the labia with water, and dab yourself dry. Use 2 fingers to keep the labia apart while urinating.

For men:

Pull back the foreskin, clean the glans with water, and dry it. Pull the foreskin back while urinating.

- Carefully close the container with the cap, and write your name and date of birth on the container.
- Immediately bring the urine to the doctor's office. If this is not possible, the urine must be kept in the **fridge**.
- Please complete this form (your details and complaints).
- Hand in the urine before _____ o'clock. You can call the results after _____ o'clock.
